

## Programs and installation

The archive BACAMAR1.ZIP contains the folder BACAMAR1. In this folder there are:

This file (ReadAboutProgramsVol.1.PDF)

The file BACAMARA which is an HP49G directory that contains all programs of the marathon. If you transfer this file to your HP49G, then use XMODEM. A new directory will be created on the HP49G, with the name BACAMARA, in which you will find the programs.

The file BACAMAR1.PDF which is the Basic Calculus Marathon Volume 1.

The folder PROGRAMS\_TXT which contains all programs of first volume of the marathon as text files. You can transfer them to the HP49G using Kermit, but they are thought for editing rather, than for transferring. If you would like to change some program, then you can do that on your Mac/PC using your favourite text editor and a real keyboard, and then transfer the program to your HP49G. The programs in this folder can be transferred to the HP49G, but you must rename them on your HP49G, when the transfer is done. The table below shows all programs that have to be renamed.

Rename this	To this
TOFACT	FACT
TOTERMS	TERMS
derSTOSder	der der
dnTOdv	dn dv
