

var1 – Statistical Summary from a List

José Maurício Schneedorf Ferreira da Silva

2026-02-10

This program is intentionally simple, yet highly useful for routine work at the research laboratory bench. It provides basic statistical parameters from a numerical list entered by the user.

```
# Program logic:
```

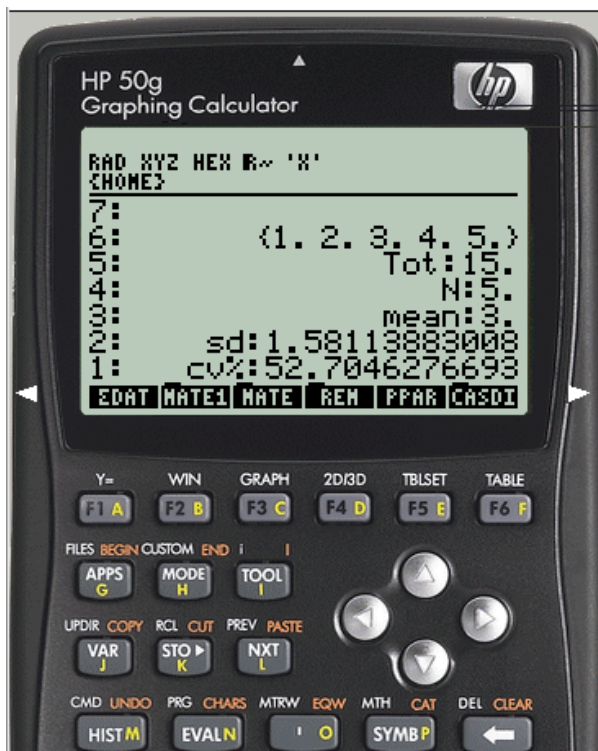

1. Input: a list of data values;
2. Output: sum, number of elements, mean, standard deviation, and coefficient of variation (CV%).

1 Files

1. Program
2. Source code
3. This tutorial

```
# Program usage
```

1. Enter the data as a numeric list;
2. Select "var1" to execute the program.
