

Installing HPUserEdit on a Windows PC

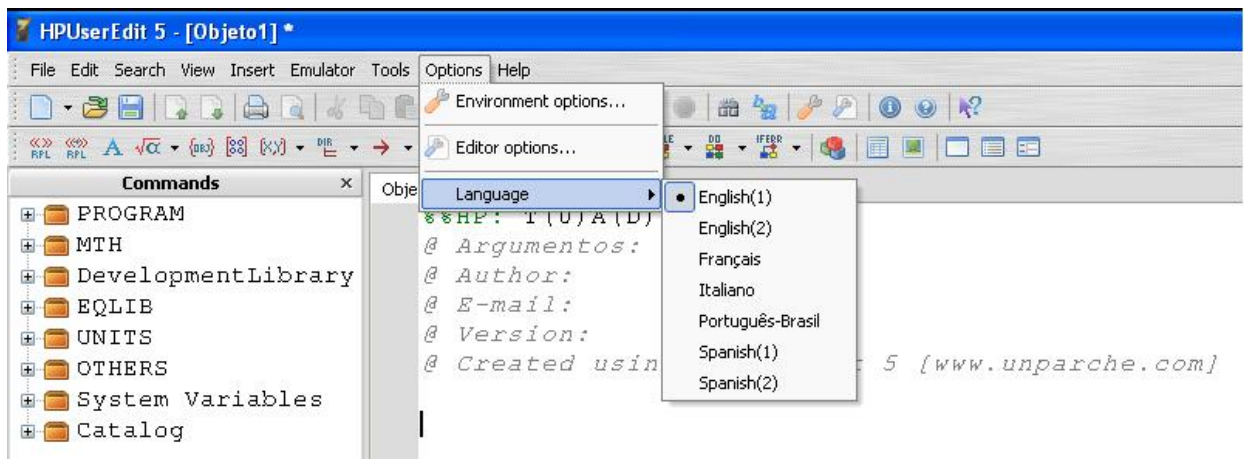

1. Download folder hpuseredit540850.zip to your PC, and open it. It can be deleted after installation.
2. Run HPUserEdit54.exe and follow the setup instructions.
3. Launch HPUserEdit 5.

The default language is Spanish, however other languages can be selected as follows,

1. Select 'Opciones' (Options) and then 'Idiomas' (Language)

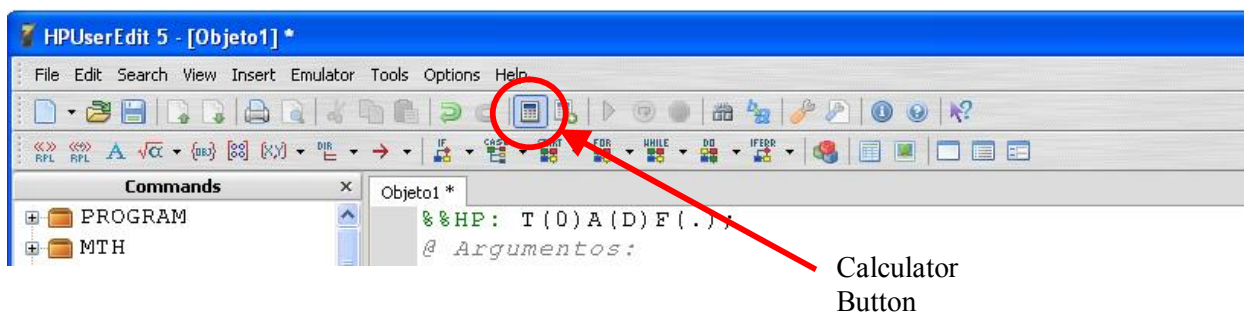

2. Select your preferred language. English (1) is used in this document.

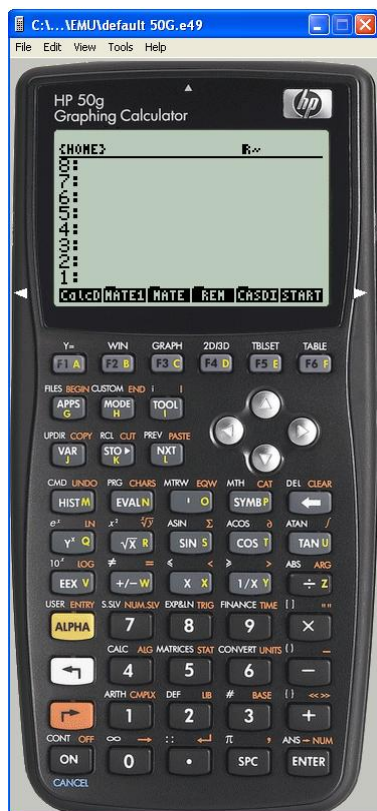

Launching a Program on the Emulator

1. Download a calculator folder xxxx-PROGRAM-PACKAGE-Vxxx.ZIP to your PC, unzip the folder (Extract All...), and open it. The zip folder can be deleted after installation.
2. Launch HPUserEdit 5
3. Launch the HP50g emulator by pressing the calculator button shown below.

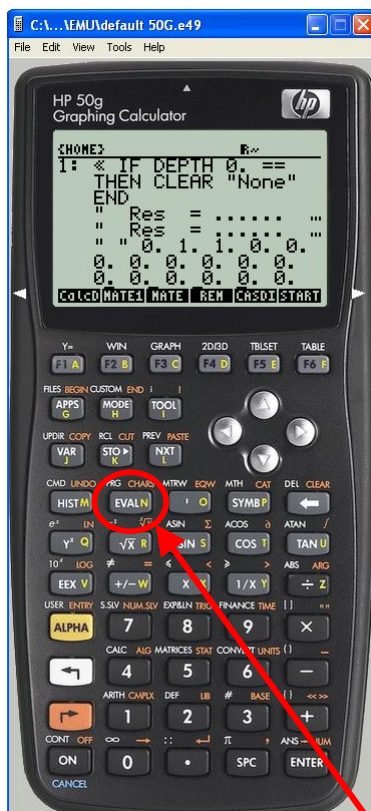

A window appears with a virtual HP50g, as shown below. The HPUserEdit 5 window may be minimized after the emulator is launched.

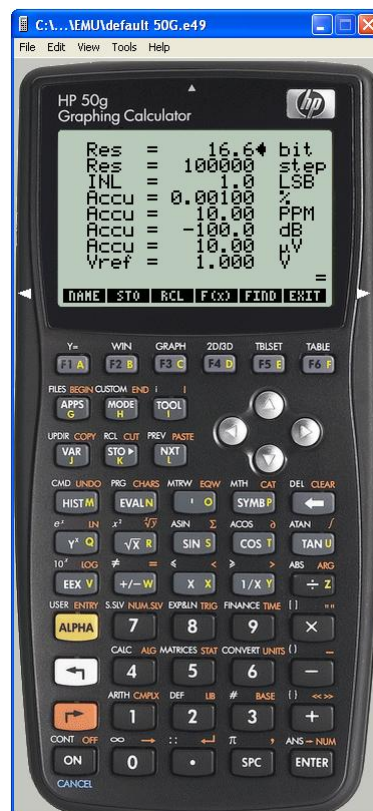

4. Drag and drop the program file (i.e., ACCU.hp) from the unzipped folder to the calculator screen and press the __ key. These programs cannot be launched using the File-Open menu.

Emulator

Program dropped to screen

Program launched

__ key

The program can be operated from the PC's keyboard or by clicking the emulator keys with a mouse. Please refer the program's User's Guide for operating instruction.
