

SAMEGAME for the HP PRIME

By Tony Gallo (tgallo@tbaytel.net)

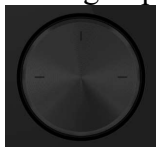

Rules:

The object of the game is to clear the board by selecting groups of adjacent circles of the same color to make them disappear. You can only remove groups of size 2 or larger. The points (click score) for a group increase with its size. The points are calculated by $(n-2)^2$, where n is the size of the group.

Navigation:

To choose a group you can either touch one of the circles in the group or use the rocker

wheel to highlight a circle in a group. Once a group highlighted you can

either touch any circle in the group or press ENTER to remove the group and accumulate the points.

The High Score indicates the highest score achieved during your current session of games. It is not saved when you exit the game.
