Touch (or mouse) navigation and Keyboard navigation (\triangleleft , \triangleright , $\textcircled{\text{I}}$, $\textcircled{\text{D}}$, A, B, C,...)

Data are stored in Spreadsheets created and named with the Spreadsheet App of the HP Prime :

- The characteristics of the elements of the Periodic Table are stored in **Mndlvc** spreadsheet.
- Types and Colors of categories of elements and trilingual menus are stored in **Mn_Cl** spreadsheet.
- The locations of the elements in the periodic table are in **Mn_Nv** spreadsheet.

Thus it is possible to modify the data (or to translate some) without interfering with interactive navigation algorithm stored in the program that is *independent* of data.
